

DEPOT-TO-PATIENT SERVICE

OVERVIEW OF OUR DEPOT-TO-PATIENT SOLUTION TO SUPPORT DECENTRALIZED CLINICAL TRIALS IN THE US

If you have questions about our global Direct-to-Patient service offering, please contact us.

CONTACT US

HOW IT WORKS

Your clinical drug is packaged and labeled at our Thermo Fisher Scientific site. Investigational materials packaged outside the US will be transferred to one of our Thermo Fisher Scientific depots in the US for distribution.

Depot inventory provides full flexibility to cover traditional supply, hybrid and fully virtual clinical trial needs within US.

A principal investigator sends the Depot-to-Patient order request (IRT or non-IRT).

Our data protection compliant processes manage the order fulfillment using a GMP/GCP/GDP compliant clinical supply chain system.

Our Direct-to-Patient Contact Center enables delivery to the patient as per date and time window coordinated and communicated with patient or home nurse. A qualified courier ensures the delivery of the study medication and ancillaries (if applicable) to the patient's home per your trial needs.
