

CDMO checklist to launch your molecule globally

Do you have a molecule that's ready for the global market? Choosing the right CDMO partner from the start can help you launch your new drug worldwide with confidence. Make sure you check these boxes before selecting the right outsourcing partner.

Prepare for global regulatory filings

Make sure the CDMO has a regulatory affairs team well versed in ICH/CMC to support pre- and post-submissions as well as lifecycle management.

Confirm their quality

Check the CDMO's global quality standards and confirm a solid track record with regulatory bodies.

Ensure their supply chain

Pick a company with strictly controlled and well-sourced raw materials supply. Dual sourcing can help eliminate costly timeline delays.

Protect your IP

Choose a partner whose sole priority is manufacturing your drug, not developing their own, to eliminate any conflicts of interest regarding your intellectual property.

Avoid CDMOs that overcommit

Some CDMOs will try to hook you with promises of ridiculously cheap services at ultra-fast timelines, then fail to perform. If it sounds too good to be true, it probably is.
